OpenText Accelerated Modernization Program

Smarter information management, integration and decommissioning

- **Improve business processes**
- **Boost employee productivity**
- **Prepare for future challenges**

The OpenText Accelerated Modernization Program (AMP) provides a phased approach to recharge tired legacy applications and prepare for future needs.

A comprehensive plan based on use cases, pain points, potential impact and benefits, paired with strong business justification, will prepare staff to think big.

We do not recommend a rip-and-replace approach.
A phased approach allows your organization to achieve iterative wins, demonstrating value.

Phase 1
Assess and deploy

After a thorough assessment, OpenText experts produce a functional environment to address your business's needs and applications with an **OpenText™ Content Cloud solution**.

Phase 2
Modernize, adopt and manage

Our experts work with you to deploy a scalable enterprise solution with prescriptive services that accelerate time-to-value, maximize returns and offset internal administration costs. Through **Customer Success Services**, **Learning Services** and **Managed Services**, OpenText will ensure your modernization success.

Phase 3
Decommission

Whether over multiple stages or with a supporting archiving plan, OpenText helps you build the strategy that is best for your business. **Decommissioning legacy applications** requires careful planning to minimize risk and disruption.

Through the AMP, OpenText experts work to understand:

- **Your organization's unique business requirements.**
- **How this project will impact multiple areas of your business.**
- **How this move fits into your strategic initiatives.**

Modern work starts with smarter information management. Learn more
